Implant therapy for the edentulous patient: A review of the latest workflow and treatment options

Implant therapy in the edentulous or soon-to-be edentulous patient is an expanding segment of clinical practice. Thanks to advancements in technologies and techniques, dental professionals are now able to predictably increase function, form and esthetics for this patient population.

The purpose of this course is to provide a comprehensive overview of the evolving treatment options and planning concepts that help contribute to successful full arch treatment. Specific challenges with the edentulous population as well as clinical tips and pitfalls found in specific clinical situations will be discussed.

At the completion of this course, participants will be able to understand:

- Various edentulous treatment options including implant-assisted and implant-supported restorations.
- How to identify the best treatment option based on individual patient needs and expectations.
- The importance of diagnosis, communication and treatment planning.
- The benefits of new edentulous treatment options including patient-specific friction-retained prostheses and screw-retained fixed hybrids on a minimum of 4 implants.
- How to simplify and increase the predictability of fixed and removable cases.

Featured speaker

Dr. Barry Goldenberg graduated from Washington University School of Dental Medicine in 1982. He has been restoring implants since 1986 in his St. Louis County private practice, which is limited to Prosthodontics and Implant Reconstruction. During his lectures

on restoring dental implants, he explores computer utilization in the diagnosis and treatment planning for implant dentistry. Dr. Goldenberg is a member of the American College of Prosthodontists, the ADA and the Academy of Osseointegration. He is also a fellow in the ICOI and a Master in the IPS section of the ICOI.

The participation of this speaker has been made possible through support from Dentsply Sirona Implants.
